THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

This action is in response to the arguments filed 28 April 2008. Claims 1-31 are currently pending.

Allowable Subject Matter

Claims 1-31 are allowed. The following is an examiner's statement of reasons for allowance:

Independent claim 1 is directed to an electronic seal comprising an input/output section and an advance authentication processing section. Independent claim 14 is directed to a memory medium comprising an advance authentication processing section and an input/output section. Independent claim 27 is directed to an advance authentication system comprising a memory medium and electronic seal as described in claims 1 and 14. In this authentication system, the advance authentication processing section of the memory medium generates a random number, and encrypts the random number based on a prescribed key. The input/output section of the memory medium then outputs the encrypted random number. The encrypted random number is received by the input/output section of the electronic seal and decrypted by the advance authentication processing section of the electronic seal using a secret key related to the prescribed key. The advance authentication processing section of the electronic seal then re-encrypts the random number using the same secret key, and the input/output section of the electronic seal outputs the re-encrypted random number. The input/output section of the memory medium then receives the re-encrypted random number, and the advance authentication processing section of the memory medium

decrypts the newly received number using the original prescribed key, to complete the authentication process.

The disclosure of Azuma teaches a similar authentication system in which a terminal apparatus and an IC card perform mutual authentication. However, the two embodiments presented by Azuma each differ from the claimed invention in a distinct way. In the first embodiment (shown by figures 16 and 17), authentication is performed by the terminal apparatus (analogous to the memory medium) generating a random number and encrypting it with a secret key L_a , and transmitting the encrypted random number to the IC card (analogous to the electronic seal). The IC card decrypts using a secret key L_b , and transmits the decrypted random number to the terminal apparatus, which compares the received number with the generated number to authenticate the IC card. This process is then repeated in reverse, with the IC card generating a random number. This embodiment differs from the claimed invention in that the generated random number is encrypted using a secret key rather than a prescribed (i.e. public) key. Furthermore, after decryption, the IC card sends the decrypted value back to the terminal apparatus, rather than re-encrypting it with the same key used for decryption.

In the second embodiment (shown by figures 24 and 25), authentication is performed by the terminal apparatus generating a random number and encrypting it with a public (i.e. prescribed) key M_a , and transmitting the encrypted random number to the IC card. The IC card decrypts using a secret key H_b , encrypts the result using its own public key M_b , and transmits the re-encrypted random number back to the terminal

Art Unit: 2132

apparatus. The terminal apparatus then decrypts the received value using a secret key Ha, and compares the resulting value with the originally generated random number.

This embodiment is more similar to the claimed invention, but still differs in one aspect.

In the claimed invention, the electronic seal (i.e. the IC card of Azuma) re-encrypts the decrypted random number using the same key it used to decrypt the random number.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
